

PVC-F4 2026 · Harvest Value Weighting

CTCx value reference for dry parchment coffee · Colombia · band F4-2026 · valid through 15 December 2026
Published 7 September 2026 · v2.1 re-issue of 9 September 2026 on official series (upward erratum from COP 2,470,000) · Method PVC-D2 v2.1.1 · edition registered in BCP · PVC, fingerprint c476fe80 · Cherry Picked platform

COP \$2,500,000 / carga

125 kg dry parchment · yield factor 94 · COP \$20,000/kg · ≈ US\$ 796/carga · ≈ US\$ 3.88/lb green (excelso) equivalent
+16.8% over what the grower receives today at the cooperative (FNC \$2,080,000 + \$60,000 unconditional bonus) · +4.4% over the best FNC print of the last 30 days · +52.1% over cost of production · never falls during the band

KPI 1 · PREMIUM OVER THE COOPERATIVE

+16.8%

The PVC sits +16.8% above what the cooperative pays today (FNC \$2,080,000 + \$60,000). Governing term: PEC; 8% target premium over the 30-day effective coop price.

KPI 2 · FARM RETURN, BLACK

1,75×

Black is paid \$2,875,000: 1.75 times the FEPCafé cost of production scaled to the cut (\$1,643,853). Floor \$2,465,780 at a 50% dignity margin.

KPI 3 · FCA PREMIUM, BLACK

+72%

US\$ 14.43/kg FCA Bogotá (6.55/lb) on 78 kg guaranteed per carga, against a 3.80/lb market reference: 7.3 ¢ per 12 g cup.

CTCx quality ladder · what CTCx pays (PVC × 1.0 is a public reference and is never bought)

Tier	SCA score	Mult.	COP / carga	US\$ / carga	Min. lot · MOQ	N2 FCA US\$/kg	N3 CIP at MOQ	N4 DDP Estados Unidos
Reference	< 80 · federation grade	×1.0	\$2,500,000	796	not sold	—	—	—
Black	80.0 – 83.9	×1.15	\$2,875,000	915	5 cargas · 228 kg	14.43	19.11	20.66
Red	84.0 – 85.9	×1.3	\$3,250,000	1.035	5 cargas · 228 kg	16.08	20.77	22.32
Blue	86.0 – 87.9	×1.6	\$4,000,000	1.273	3 cargas · 150 kg	19.32	24.03	25.58
Gold	88.0 – 88.9	×2	\$5,000,000	1.592	3 cargas · 60 kg	23.71	29.45	31.00
Tyrian	≥ 89.0 · genetics A/B · auction from Gold	closing ex. ×2.6	\$6,500,000	2.069	1 carga · 30 kg	30.43	37.52	39.07

Grade = SCA score + recognitions (+1 / ++2), gated by genetics (Gold and Tyrian: A/B only) and yield factor (≤ 94; Black up to 98). Each tier doubles the premium of the one below. Buyer MOQ in vacuum-packed green (6 kg bags): Black/Red 228 kg, Blue 150 kg, Gold 60 kg, Tyrian 30 kg. Every lot is cupped by a Q grader on a 2 kg sample with a sealed counter-sample; the grower ships it free (prepaid label) and pays a discounted share of the COP \$200,000 evaluation fee up front, never inside the price. Buyer prices are built in US\$ at the cut-date TRM on 78 kg of guaranteed vacuum-packed green per carga: FCA Bogotá (≈FOB) → CIP airport (≈CIF; air freight by weight tier, never worse than quoted) → DDP in enabled destinations; chain costs are estimates pending quotes (D2 §13.1). Yield-factor adjustment per the FNC table of the delivery day; multiplier applied after the adjustment. Break-even FCA Bogotá = farm gate on 78 kg guaranteed per carga + processing and packing + palletising, inland transport and export costs + CTCx fee (base × tier factor); CIP adds air freight at the MOQ weight tier, insurance and the CIP service surcharge, shown as separate lines on every listing. Chain costs are estimates (D2 §13.1).

How the PVC is built

Layer	What it does	Value
1 · Market anchor	FNC reference price April–August (weighted 1:2:3:4:5) blended 60/40 with the ICE futures strip for Sep–Nov, adjusted by the modifier (+4.1%).	\$2,255,978
1b · Attractiveness vs. cooperative	Effective cooperative price (30-day FNC + documented unconditional bonus of \$60,000; PIC and MECIC currently \$0) plus an 8% target premium. This is the term that sets this edition.	\$2,497,413
2 · Cost floor	FEPCafé average cost of production (\$1,643,853) × 1.50 dignity return: for a family farm, two pesos back for every peso spent. The PVC never falls below the floor.	\$2,465,780
3 · Modifier	Seven factors with fixed scoring rules: coffee supply & demand (ICE certified stocks at their lowest since 1999, grading queue, crops), El Niño, Brazilian real, Colombian peso, oil & fertilizer, tariffs/EUDR, speculators. Capped at ±15%.	+4.1%
Result	max(Floor ; 30-day effective coop price × 1.08 ; Anchor × (1 + Modifier)), rounded to COP 10,000	\$2,500,000

How buying works on Cherry Picked. Every lot listed has already been cupped, its first carga has already been bought by CTCx, and the rest of the grower's declared quantity is reserved at the listed price for the band period. You pay **60% on purchase**, which is what lets CTCx pay the grower within two business days, and **40% when CTCx confirms the purchase from the grower**, before shipment. Purchases are firm; a formula reservation for the next band can be cancelled for 7.5% of the PVC per carga, the same exit figure a grower pays. Prices never fall during the band; if the FNC price reaches the PVC on 10 of 15 daily prints, the PVC is re-anchored at the next month-end for new listings only, never retroactively. Lots ship by air, consolidated at the end of the band (sales from the third month ship with the next consolidation); each listing shows its ship date. **Value per cup:** the Black FCA (≈FOB) premium over the market reference for its grade is about 7.3 US cents per 12 g cup; Gold, 8.9 cents. Method (D2), sources (D1), computation (D3) and an annual independent review are available on request. **Next edition: PVC-F1 2027**, published 15 October 2026 for the sales window of 15 December to 15 March.

Market context at the cut lives in D3 \$2 and \$11.
